OperaLucis and OperaAuris are formed of tiles in Murano glass and 24 karat gold leaves. These exclusive and precious materials and the craftsmanship of every single piece give a unique artistic value to the finished product.

OperaLucis integrates the technology of LED lights which splendidly highlight the characteristic impact of Murano glass and the luminosity of the gold leaf.

OperaAuris creates luminescent textures that vibrate under the specifically designed lighting.

The precious materials and the exquisite workmanship are related to Venice and to the TeamV in which persons with different skills, abilities and professional capacities join together around the exclusive project of the Opere, created and managed by the Venistile brand that guarantees quality and exclusiveness.

The Opere Venistile production possesses a material valence that can be touched and details of the materials used and workmanship can be admired on close observation.

The specific style and the simple but refined geometry of the design permit a vast range of creations on the surface of the tiles and make the product perfectly adaptable to a specific situation, favoring the formal requirements of the overall project.

The scenic effect of the installation permits Opere Venistile to be inserted in high level, exclusive interiors with formal solutions of outstanding richness and efficiency in space usage.

OperaLucis and OperaAuris are Venistile creations entirely Made in Italy.

Designer: Altiero Desio
